

# **WEP - Loops & Arrays**

Repeating code & multiple Values in a variable

# Agenda

- Loops
- Arrays
- Questions

# Learn Objectives

- You understand what a loop is
- You know loop types
- You know what is loop traversing
- You know what arrays are

# Language Constructs

## Loops

.

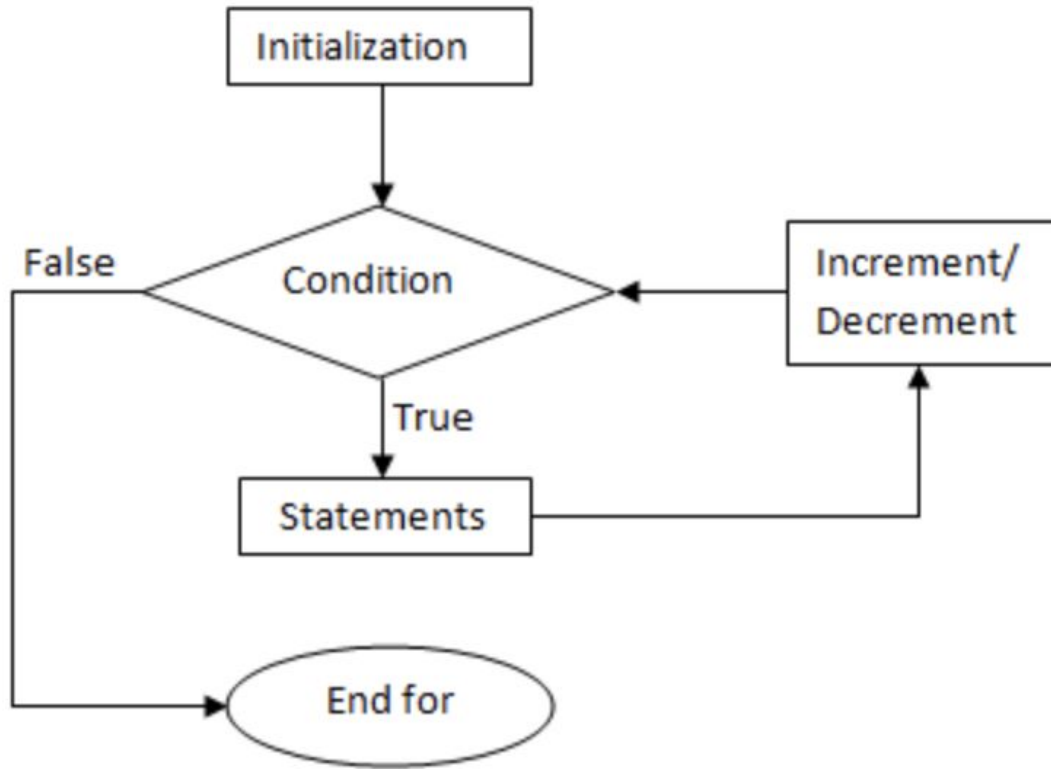

- It's a way to run a code part multiple times
- Code Reusing
- A code Block (scope)

### Types of loops

- for()
- while, do while
- for-in
- for-of
- break, continue

A loop

A loop with an incrementing index

*initialization is a  
separate statement*

*loop-  
continuation  
condition*

```
let power = 1;  
while ( power <= n/2 )
```

*braces are  
optional  
when body  
is a single  
statement*

```
{  
    power = 2*power;  
}
```

*body*

While loop

```
let i = 3;

while (i) {

    alert( i );

    i--;

}

/*****/

let i = 0;

do {

    alert( i );

    i++;

} while (i < 3);
```

while , do while

Foor loop

```
let myStringArray = ["Hello", "World"];

let arrayLength = myStringArray.length;

for (let i = 0; i < arrayLength; i++) {

    console.log(myStringArray[i]);

}
```

Looping with classical “for loop”

```
let fruitList = ["elma", "armut", "cilek", "domates"];
```

```
for (let aFruit of fruitList) {
```

```
    console.log(aFruit);
```

```
}
```

Loops with new "for-of-loop"

```
let days = ["Pazartesi", "Salı", "Carsamba", "Persembe", "Cuma",  
"Cumartesi", "Pazar"];
```

```
days.forEach(function(aDay) {
```

```
    console.log(aDay);
```

```
});
```

```
// Mit Arrow Functions
```

```
days.forEach(aDay => console.log(aDay));
```

Looping with the method "forEach" from the array

# Language Constructs

## Arrays

.

- An array is an address in memory
- It shows a series of data bound together.
- Individual elements in an array can be accessed directly.
- With the help of arrays we can keep many data together with one variable.
- Arrays can automatically increase in size

# array

/ə'reɪ/ 

*noun*

1. an impressive display or range of a particular type of thing.  
"there is a vast array of literature on the topic"
2. an ordered series or arrangement.  
"several arrays of solar panels will help provide power"  
*synonyms:* [arrangement](#), assembling, [assemblage](#), line-up, formation, ordering, [disposition](#), marshalling, [muster](#), amassing; [More](#)

*verb*

1. display or arrange (things) in a particular way.  
"the manifesto immediately divided the forces arrayed against him"  
*synonyms:* [arrange](#), [assemble](#), draw up, [group](#), [order](#), [range](#), [place](#), [position](#), set out, set forth, [dispose](#), [marshal](#), [muster](#); [More](#)
2. dress someone in (the clothes specified).  
"they were arrayed in Hungarian national dress"  
*synonyms:* [dress](#), [attire](#), [clothe](#), [robe](#), [garb](#), [deck](#), deck out, [drape](#), [accoutre](#), [outfit](#), fit out, [costume](#), get up, turn out, trick out/up; [More](#)

# Array City

**One-dimensional array with six elements**

Concept of an Array

An array of 10 elements.

Concept of Array

# WHY ARRAY?

## Problem?

- Implement an application that will calculate 100 students exam average.
- Variables needed?  
    int studentA;  
    int studentB;  
    int studentC;  
    int studentD;  
    ...

Why to use an array?

Excel ribbon: FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, VIEW, DEVELOP

Insert Slicer, Insert Timeline, Filter Connections, Refresh, Change Data Source, Actions, Calculations, Tools, Show

Formula bar: A4, Grape

	A	B	C
1	Fruits	Sum of Total Sales	
2	Apple	230	
3	Banana	270	
4	Grape	700	
5	Guava	770	
6	Kiwi Fruit	760	
7	Mango	980	
8	Orange	190	
9	Pear	120	
10	Pineapple	440	
11	Strawberry	380	
12	Watermelon	220	
13	Grand Total	5060	
14			
15			
16			

PivotTable Fields

Choose fields to add to report:

- ☒ Fruits
- ☒ Total Sales

Drag fields between areas below:

FILTERS	COLUMNS

ROWS	VALUES
Fruits	Sum of Total ...

☐ Defer Layout Update UPDATE

Ever used an array before?!

## Array is empty!

source: <https://www.safaribooksonline.com/library/view/head-first-programming/9780596806682/ch04.html>

Array is filled out!

source: <https://www.safaribooksonline.com/library/view/head-first-programming/9780596806682/ch04.html>

How can I keep month names in an array?

How does the memory look like?

source: <https://codeforwin.org/2015/07/array-programming-exercises-and.html>

How to access single elements in an array?

```
var A = [5,6], B = [1,2,3], C = [1, 2, 4];
```

**B.push(1);**

No room for the new item : 1) release B memory

2) Allocate a 4 slot array for B

3) copy array and 4) set new value

**C.pop();**

Memory is fragmented. It will be later defragmented into :

# What happens in memory when operations are performed on an array?

source: <https://gamealchemist.wordpress.com/2013/05/01/lets-get-those-javascript-arrays-to-work-fast/>

# Array Creation

literal

```
let leeresArray = [];
```

```
let myNotes= [4, 4, 2, 5, 6, 6];
```

```
let friends = ["Rabia", "Ilyas",  
"Nurullah", "Cemil", "Hamide",  
"Taner"];
```

# let's try it!

**Create an Array with daynames**

# Array Creation

## With Array Constructor

```
// empty Garage
```

```
let myEmptyGarage = new Array();
```

```
// Garage with cars
```

```
let myGarage = new Array("X5", "Ferrari", "VW Golf");
```

```
// Special Case
```

```
let garageWithEmptySlots = new Array( 5);
```

# let's try it!

**Create an Array with month names**

# let's try it!

**Create an array of 9 numbers, display the first, last and middle number in the console.**

Traversing/Navigation in Arrays

# Type of Traversing

- Classic "for" Loop
- "for-of" Loop
- ".forEach()" method from the array itself
- ...

```
let myStringArray = ["Hello", "World"];

let arrayLength = myStringArray.length;

for (let i = 0; i < arrayLength; i++) {

    console.log(myStringArray[i]);

}
```

Looping mit klassischem “for loop”

# let's try it!

**Erstelle ein Array mit Kindernamen, zeige Sie im Console an.**

```
let fruitList = ["elma", "armut", "cilek", "domates"];

for (let aFruit of fruitList) {

    console.log(aFruit);

}
```

Looping mit neuem “for-of loop”

# let's try it!

**Erstelle ein Array mit Ländernamen und zeige Sie im Console an.**

```
let days = ["Pazartesi", "Sali", "Carsamba", "Persembe", "Cuma",  
"Cumartesi", "Pazar"];
```

```
days.forEach(function(aDay) {  
  
    console.log(aDay);  
  
});
```

```
// Mit Arrow Functions
```

```
days.forEach(aDay => console.log(aDay));
```

Looping mit der Methode "forEach" vom Array

# let's try it!

**Erstelle ein Array mit Monatsnamen und zeige sie mit der Reihenfolge im Console an.**
